Leading pharmaceutical and life sciences facilities actively deploying Sensicast for FDA 21 CFR Part 11 Compliance

SensiNet Wireless Sensor Networks in great demand to speed up and drop cost of compliance

BOSTON – August 28, 2007, Sensicast® Systems, the world's leading provider of turnkey wireless sensor network systems, today announced it has seen rapidly accelerating demand for its SensiNet™ solutions from pharmaceutical labs, drug manufacturers, and bio-test facilities seeking to improve and accelerate the process of FDA 21 CFR Part 11 compliance.

These life sciences facilities are changing how they meet FDA regulations by deploying SensiNet systems to accurately monitor and report temperature, humidity, and other key real-time operational data from research and manufacturing processes, and storage facilities.

SensiNet has been deployed by world-class bioscience leaders including Amgen, Becton Dickinson, Butler Health, and KV Pharmaceutical. SensiNet wirelessly tracks conditions in laboratory and manufacturing facilities-- eliminating the need for time-consuming manual data retrieval and reporting. This has significantly reduced the time and cost of FDA 21 CFR Part 11 compliance.

"Pharmaceutical manufacturers will find Sensicast attractive because it can help them to reduce the cost of, and time to validation, and accelerate product time to market," said John Blanchard, Principal Pharmaceutical Industry Analyst with ARC Advisory Group.

"Mandated to rapidly implement compliance with FDA regulations--new prospects are engaging us in increasing numbers," said Gary Ambrosino, CEO of Sensicast. "SensiNet enables our customers to collect process and environment data required for 21 CFR Part 11 compliance more easily, and to document safe research, manufacturing, and storage of their products (in conformance with cGMP and GLP)."

About Sensicast

Sensicast provides turnkey Wireless Sensor Network systems that help operating managers dramatically reduce costs, improve efficiency and document compliance. Sensicast's easy-to-deploy SensiNet® systems report real-time data from applications, processes, and facility conditions. SensiNet is a patented, self-installing, self-healing solution that captures critical data through Smart Sensors and makes the information available and actionable through internal and remote Web-based access. SensiNet meets the needs of a range of industrial and commercial enterprises—including remote monitoring of temperature, energy, moisture/humidity, and other data types; while facilitating governmental/environmental compliance. www.sensicast.com.
