

## Sensicast Systems Moves to Expanded Facilities

*Rapid business growth drives wireless sensor network solution provider to new, larger headquarters*

**NEEDHAM, MASS--August 13, 2007**--After six years of continued growth in its prior location, Sensicast Systems has moved into new, expanded facilities effective August 13, 2007. 200 Reservoir Street in Needham, Massachusetts (USA) is the new headquarters for Sensicast—a major supplier of wireless sensor network systems and services.

According to Allan Peak, VP of Engineering at Sensicast, "The new facility brings us more room to meet continuing company growth. An enhanced state-of-the-art manufacturing facility provides additional capacity to meet growing worldwide demand for SensiNet® and to enable us to produce and deliver lab-certified sensors. We have also expanded our customer facility that now includes a dedicated customer training center and additional meeting space."

According to Allan Peak, VP of Engineering at Sensicast, "The new facility brings us more room to meet continuing company growth. An enhanced state-of-the-art manufacturing facility provides additional capacity to meet growing worldwide demand for SensiNet® and to enable us to produce and deliver lab-certified sensors. We have also expanded our customer facility that now includes a dedicated customer training center and additional meeting space."

The company's expanded lab-certified manufacturing facility will help meet "best practices" for FDA 21 CFR Part 11 compliance, as well as GLP, GMP, and ISO requirements. As Sensicast's customers in life sciences, pharmaceutical, food and beverage manufacturing and processing need to submit data captured by SensiNet equipment to the EPA, FDA and other regulatory organizations-- Sensicast offers A2LA-accredited calibration services to users of its SensiNet systems. Through this service, operators of SensiNet networks can ensure that Smart Sensors running in their facilities are calibrated according to ISO/ICE 17025-1999, using dedicated equipment.

The new address:  
Sensicast Systems, Inc.  
200 Reservoir Street, Suite 100  
Needham, MA 02494  
P: 781-453-2555, F: 781-453-0601

### About Sensicast

Sensicast provides turnkey Wireless Sensor Network systems and services that help operating managers dramatically reduce costs & improve efficiency. Sensicast's easy-to-deploy SensiNet® systems report real-time data from applications, processes, and facility conditions. SensiNet is a patented, self-installing, self-healing solution that captures critical data through Smart Sensors and makes the information available and actionable through internal and remote Web-based access. SensiNet meets the needs of a range of industrial and commercial enterprises—including remote monitoring of temperature, energy, moisture/humidity, and other data types; while also facilitating governmental/environmental compliance.
