**Sensicast Integrates SensiNet Wireless Sensor Network with
Leading Industrial Automation and Control Systems**

*Wireless Sensor Networks now fully interoperable with CITECT, ICONICS,
Invensys, National Instruments, and NK Technologies*

Houston, TX and Needham, MA: October 17, 2006 - At **ISA Expo 2006** Sensicast Systems (www.sensicast.com) today announced proven interoperability and comprehensive integration of its flagship SensiNet Wireless Sensor Network platform with an impressive range of systems for control and automation from leading vendors whose products run in industrial and commercial facilities.

At Booth #2267 (Industrial Communications Pavillion), Sensicast is showcasing and shipping fully-operational systems that are tightly integrated with third-party applications from vendors including CITECT, ICONICS, Invensys/Wonderware, National Instruments-Lab View, and NK Technologies.

"Automation and control professionals want to justify and gain value from prior investments while leveraging new technologies to give them better operational intelligence and deliver quick and sustainable ROI," said Paul Richards, VP of Business Development and Partnerships, Sensicast. "Through joint engineering and integration initiatives with our partners -- Sensicast has opened up the silos of data trapped within sensor networks and built cost-effective systems that now connect that information to the automation and IT infrastructures."

Sensicast's **SensiNet 3.0[®]** is the industry's first end-to-end, wireless mesh sensor network solution that can be tailored to specific applications using a self-configuring building block approach. Through its integration with popular industrial systems--SensiNet enables pervasive connectivity for easy data access, representation and reporting--yielding improved process control and dramatic operational efficiencies.

Applications that are pre-integrated with SensiNet those from the following vendors:

Citect

www.citect.com

ISA-Booth # 1932

Citect is a global provider of industrial automation, real-time intelligence, and next generation manufacturing execution systems (MES). Sensicast's SensiNet Services Gateway integrates with CitectSCADA for enhanced visualization and data reporting.

ICONICS

www.iconics.com

ISA-Booth # 1932

ICONICS is a worldwide leader in OPC, Web-enabled HMI/SCADA and Manufacturing Intelligence software. By "auto discovering" Smart Sensors within a SensiNet network, Sensicast synchronizes data with Iconics' GENESIS32 HMI/SCADA suite to provide real-time visualization, alarm management and plant historian functionality. Together Iconics and Sensicast give users real-time visibility into enterprise-wide operations and systems.

Invensys (Wonderware) www.invesys.com ISA-Booth # 2226

Invensys is the world leader in industrial asset performance management. Sensicast's SensiNet Services Gateway meshes with Invensys Wonderware for seamless data integration while capturing real-time information from wireless sensor networks operating in refineries, gas plants, petrochemicals plants, power plants, and pulp and paper mills.

**National Instruments
(NI LabVIEW)** www.ni.com ISA-Booth # 1842

SensiNet networks integrate with National Instruments' tools for data acquisition and process control, including the NI LabVIEW solution for research and development and test-equipment. NI's virtual instrumentation increases productivity and lowers costs for test, control and design applications that integrate easily with SensiNet. At ISA Expo, Sensicast is a participant of the National Instruments Lab VIEW Wireless Sensor Network Tour.

NK Technologies www.nktechnologies.com ISA-Booth # 1647

NK Technologies is a leading manufacturer of Current Sensing Relays, Current Transducers, and Ground Fault Sensors for use in industrial and factory automation. Sensicast works closely with NK Technology to deliver joint solutions for motor status monitoring, fan/pump motor control, energy monitoring and ground fault sensing.

Sensicast SensiNet--Plug & Play Industrial Wireless Sensor Monitoring and Control

In addition to its strong integration with solutions from its partners above, through its support of ModBus, ODBC, OPC, SOAP TCP/IP and other widely used industry-standard protocols, SensiNet is also interoperable with widely deployed systems from vendors such as GE Fanuc Automation, Honeywell, and Microsoft.

Become a Sensicast Partner

About Sensicast

Sensicast provides comprehensive Wireless Sensor Networks that help operating managers dramatically reduce costs & improve efficiency. Sensicast's robust and easy-to-deploy SensiNet systems continuously report real-time operations data from applications, processes, and facility conditions. SensiNet is a patented, self-installing, self-healing "Zero-IT" solution that captures critical data through Smart Sensors and makes the information available and actionable through internal and Web-based access. Sensicast's Pervasive Sensing™ solutions address the needs of a wide range of industrial and commercial enterprises" including remote monitoring of temperature, energy use, moisture/humidity, and other data types; while also facilitating predictive maintenance and governmental/environmental compliance. For more information visit www.sensicast.com
